

# CANNA AQUA GROW SCHEDULE

Below is a feeding guide for growing in a hydroponics system while using the Canna Aqua range of nutrients. The Canna Aqua range is used in re-circulating systems. They come in a part A and a part B and you insert equal amounts of “A” and equal amounts of “B”. This grow schedule is the one recommended by canna but like all grow schedules you should take it with a pinch of salt and use it is a guide only. Have a look at your plants regularly so you can keep on top of any problems that might occur. Luckily with the Canna range any problems are very rare and usually down to human error.
